GoOrder – Online Food Ordering & Delivery Platform

Project Name

GoOrder – Online Food Ordering & Delivery Platform

Team Name

GoOrder Team

Members

1. Yigitalieva Mubina (20253721)
2. Rahmonova Mohinur (20253719)

Topic

Online Food Ordering and Delivery Platform using Object-Oriented Programming in C++.

Reason for Selecting the Topic

We selected this topic because online food delivery platforms are widely used in modern society and involve many real-life system interactions. This project is realistic, scalable, and suitable for Object-Oriented Programming concepts.

Project Goals

1. Create a realistic online food ordering and delivery system.
2. Apply OOP concepts such as encapsulation, inheritance, polymorphism, and abstraction.
3. Simulate interactions between customers, restaurants, delivery riders, and payment systems.

Team Rules

1. Complete assigned tasks before deadlines.
2. Maintain regular communication.
3. Write clean and understandable code.
4. Respect each member’s responsibilities.

Notes and Ideas

- Customer login and registration
- Bank card connection and balance checking
- Restaurant menus and food ordering
- Delivery rider order acceptance
- Waiting time and delivery tracking

Individual Task Description

Mubina: User login, payment system, and delivery tracking.
Mohinur: Restaurant/menu system and ordering logic.
